Note: A low hCG concentration might result in a week false-negative result. Therefore, do not interpret the result after 10 minutes.

1. Bring the pouch to room temperature before opening it.

2. Remove the test strip from the sealed pouch and use it as soon as possible.

3. Place the test strip on a non-absorbent flat surface, start timing, and wait for the red line(s) to appear. The result should be read at 3 minutes. It is important that the background is clear before the result is read.

- **Negative**: No line or a line in the test region (T) only, which is below the (max) line in the control region (C).
- **Invalid**: Two parallel lines (one in the test region and one in the control region) in the maximum line region (max).
- **Positive**: A line in the test region (T) and a line in the control region (C).

 dirsECTIONS fOr uSE

Allow the test strip, urine specimen and/or controls to equilibrate to room temperature (15-30°C) prior to testing.
